Resume

1/ AI-Powered Social Media Auto-Responder (HITL)

Description

Developed a high-fidelity **Human-in-the-Loop (HITL)** automation for **Kavin Bharti Mittal (Founder, Hike)** to scale authentic Twitter engagement without the manual time sink. The system uses a fine-tuned GPT model—trained on the founder’s unique voice and knowledge base—to filter noise and generate personalized reply options. These drafts are sent via **Telegram** for one-tap approval, ensuring **100% brand safety** and reducing engagement time by over **70%** (approx. 2 hours/day).

2/ Automated Competitive Intelligence Engine (Gaming Industry)

Description

Engineered an end-to-end **Competitive Intelligence (CI) pipeline** for **Hike** to automate the tracking of 5+ major industry rivals (WinZO, Dream11, MPL, etc.). The system autonomously scrapes LinkedIn, blogs, and news cycles every Monday at 9 AM, using AI to categorize raw data into structured insights like **Hiring Trends**, **Funding Rounds**, and **Product Launches**. By replacing manual research with a modular automation, the "Founders Office" saved **20+ hours per week** while gaining a 100% consistent, high-priority alert system for CXO-level moves.

3/ AI-Driven Lead Generation & Enrichment Pipeline

Author - Soma Charan
Last Updated - 27 Apr 1:45pm

Description

Designed an end-to-end **Automated Lead Prospecting** System that converts high-level interests into a qualified sales database. The workflow triggers upon form submission, using Google **Gemini** to **analyze** customer avatars and define search parameters, which are then passed to Apify/PhantomBuster for deep-web scraping. The system autonomously filters raw data, validates lead quality, and populates a structured Google Sheets CRM, ready for automated outreach via **Email or WhatsApp**, effectively removing manual prospecting from the sales cycle.

4/ Autonomous AI Email Outreach & Management Agent

Description

Designed an end-to-end **Automated Lead Prospecting System** that converts high-level interests into a qualified sales database. The workflow triggers upon form submission, using **Google Gemini** to analyze customer avatars and define search parameters, which are then passed to **Apify/PhantomBuster** for deep-web scraping. The system autonomously filters raw data, validates lead quality, and populates a structured **Google Sheets CRM**, ready for automated outreach via Email or WhatsApp, effectively removing manual prospecting from the sales cycle.

5/ AI Multi-Agent Calendar & Appointment Concierge

Description

Developed a sophisticated **Multi-Agent Scheduling** System that automates the entire lifecycle of appointment management via Telegram. The architecture features a primary AI Agent for natural language conversations (handling FAQs and intent detection), a Confirmation Agent for **Human-in-the-Loop** verification, and a Perform Operation Agent that executes complex CRUD operations (Create, Read, Update, Delete) on Google Calendar. This system manages booking requests, reschedules existing appointments, and performs automated conflict resolution, all while maintaining a seamless, conversational interface for the end-user.

6/ Autonomous WhatsApp Sales & Commerce Engine

Description

Engineered a high-conversion **WhatsApp Sales Bot** designed to manage the entire customer journey autonomously, from initial greeting to order fulfillment. The system utilizes advanced intent classification to distinguish between new orders, post-delivery support queries, and general knowledge base (**RAG**) searches. By integrating real-time action execution, the bot can process transactions, update order statuses, and seamlessly escalate complex emotional or high-priority cases to a **human supervisor**, ensuring a perfect balance of automation efficiency and customer empathy.

7/ Enterprise Call Intelligence & Automated Transcription Pipeline

Description

Architected a scalable **Asynchronous Transcription & Analysis Pipeline** to process a library of over 1,300+ voice recordings (MP3) for comprehensive business intelligence. The system utilizes a multi-stage Python architecture: first, batch-processing audio files through the **Sarvam AI API** for high-accuracy transcription; next, performing deep semantic analysis via the **Anthropic (Claude) API** to extract key sentiment, action items, and performance metrics; and finally, automating the data export to **Google Sheets/Excel** for executive review. The pipeline includes robust error handling, progress tracking, and duplicate-skipping

logic to optimize API costs and compute time.

8/ High-Performance Industrial Drone R&D (India-First Initiative)

Description

Led the end-to-end R&D lifecycle for a high-performance quadcopter at **Newagewear Distributors LLP**, aimed at reducing import dependency in the Indian drone ecosystem. As the Product Manager, I orchestrated the transition from vision to a 100% functional prototype by sourcing **90% of components indigenously** and overseeing the integration of RS2205 brushless motors, custom F4 flight controllers, and carbon-fiber X-frames. The project successfully validated a scalable hardware roadmap for applications in agriculture, logistics, and defense, achieving stable flight performance while **reducing import costs by ~70%**.

9/ Drivolo: SaaS Operations Platform for Driving Schools

Description

Architected and launched **Drivolo**, a mobile-first SaaS ERP designed to digitize the fragmented driving school industry. As the Lead Product Manager, I managed the end-to-end lifecycle—from conducting on-ground user research with school owners to overseeing the **Flutter/Firebase** development. The platform replaces manual registers with a unified dashboard for student progress tracking, instructor accountability, and expense management. Within three months of launch, the app onboarded **50+ schools** and logged over **7,500+ lessons**, reducing administrative overhead by **25%** for small business owners.

10/ ProdSense AI: The Product & Strategy Copilot

Description

Architected and developed **ProdSense AI**, an end-to-end intelligence platform that transforms fragmented signals—customer feedback, competitor moves, analytics, and meeting transcripts—into **actionable product strategy**. The system features a sophisticated multi-agent pipeline that redacts PII, clusters topics via semantic embeddings (pgvector), and performs change-point detection to surface "Rising Topics." Its standout feature is the **PRD Auto-Builder**, which utilizes RAG (**Retrieval-Augmented Generation**) to draft high-fidelity product requirements documents backed by real-time evidence, reducing the time-to-proposal for **PMs by over 80%**.

11/ AutomateAI: The AI & Automation Services Marketplace

Description

Architected the product vision and technical framework for AutomateAI, a specialized marketplace designed to bridge the gap between SMBs and **AI automation experts**. Moving beyond traditional freelancing platforms, this system integrates an AI Project Manager that uses natural language processing to convert vague client ideas into structured, technical "Automation Scope Documents." By utilizing an embedding-based matching engine, the platform connects businesses with vetted workflow engineers (**n8n, Zapier, Make**) and prompt designers, reducing project **scoping time by 60%** and ensuring **high-quality, verified deliverables** through an AI-powered quality monitor.

12/ Xads: Digital Marketplace for Outdoor Advertising

Description

Architected the end-to-end product strategy and UI/UX for **Xads**, a mobile-first marketplace designed to digitize the fragmented billboard industry in India. Borrowing the frictionless discovery of **Airbnb** and the real-time tracking of **Uber**, XHats allows businesses to discover high-traffic advertising spots, calculate reach, and book campaigns instantly. The platform's core innovation is a **Live Creative Preview** engine that automatically renders user-uploaded assets onto realistic billboard mockups, combined with a **Post-Booking Tracking** System that provides transparency from printing and logistics to final installation.
